Angus Energy plc

("Angus Energy")

Environmental Agency permission received for drilling of the Brockham side-track

Angus Energy plc. (the "Group") is pleased to announce that, further to the disclosure in its recently published AIM Admission document, it has, today, received permission from the Environmental Agency to drill the BR-X4Z sidetrack at its Brockham production oil field, license PL 235. The Group will now seek the Health and Saftey Executive ("HSE" and Oil and Gas Authority ("OGA") permissions needed to drill the BR-X4Z well at Brockham and will update the market in due course.

Jonathan Tidswell-Pretorius, Angus Energy's Chairman, commented: "Receiving the Environment Agency's permission to drill the Brockham side-track is an important step in the development of the Group. The upcoming sidetrack will allow the Group to increase and prolong the production from the Portland reservoir while also giving the Group an opportunity to assess the potential of, and if successful, produce from the Kimmeridge limestons and Top Coralian layer."
